

# **Regression analysis to determine $\nu$ $p_z$ in $W \rightarrow \ell \nu$ decay**

Kalanand Mishra, Fermilab

# Inputs

Lepton  $p_T$ ,  $\eta$ ,  $\Phi$   
MET magnitude and  $\Phi$

Leading jet  $p_T$ ,  $\eta$   
Second jet  $p_T$ ,  $\eta$

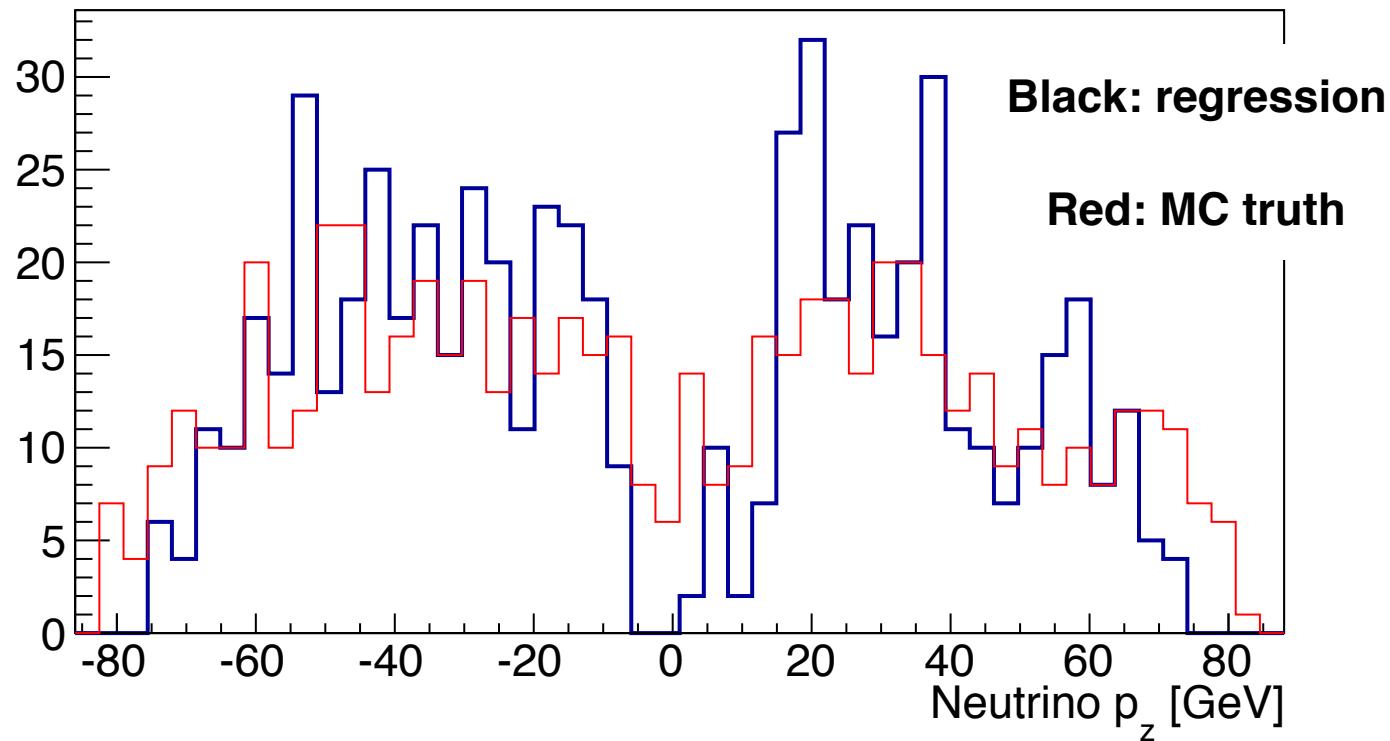

Since our final state  
has two jets in addition  
to the leptonically  
decaying W boson

Target: generated neutrino  $p_z$

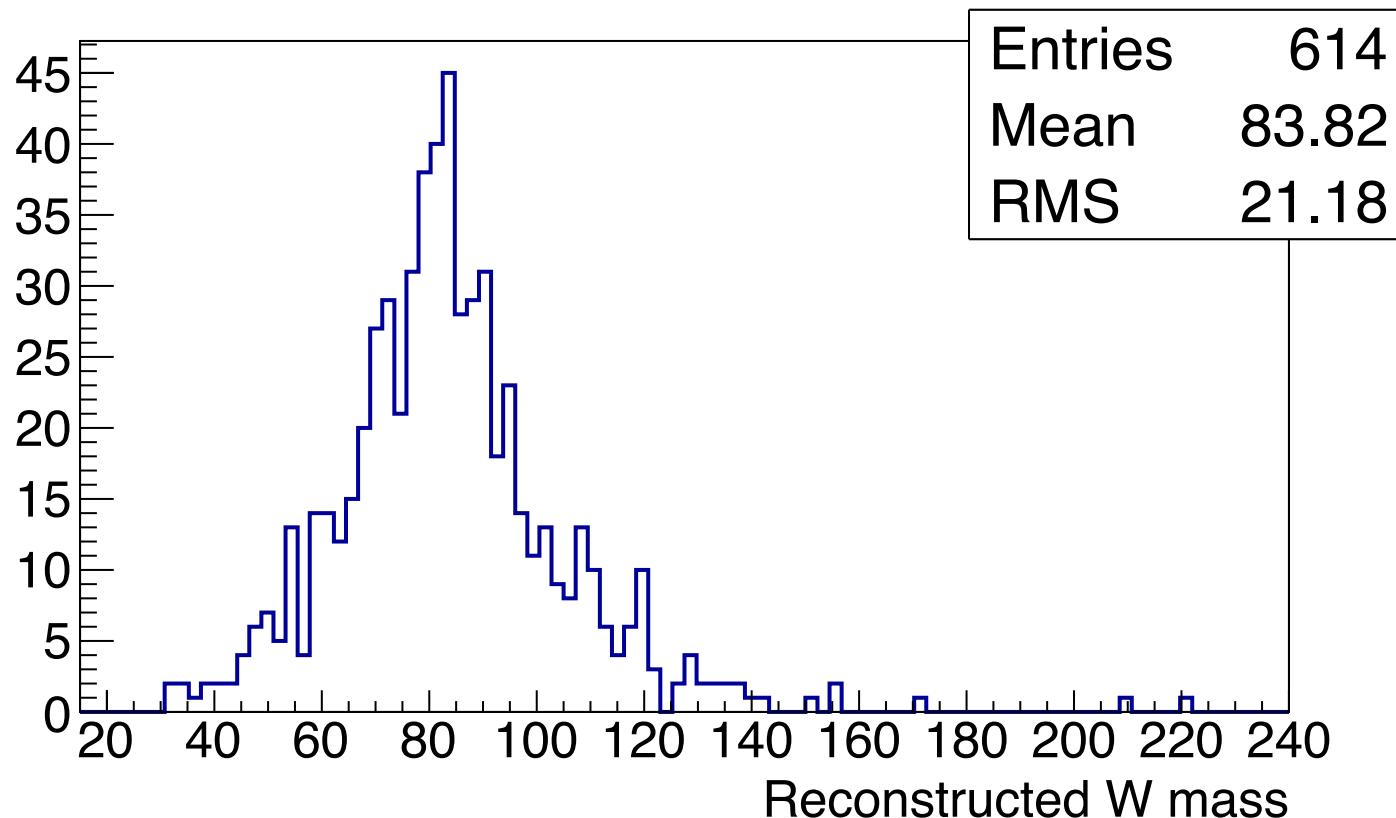

Discriminant: Boosted Decision Tree

# Output: $\nu$ $p_z$

Tested and validated on  $H(500) \rightarrow WW \rightarrow l\nu jj$  sample

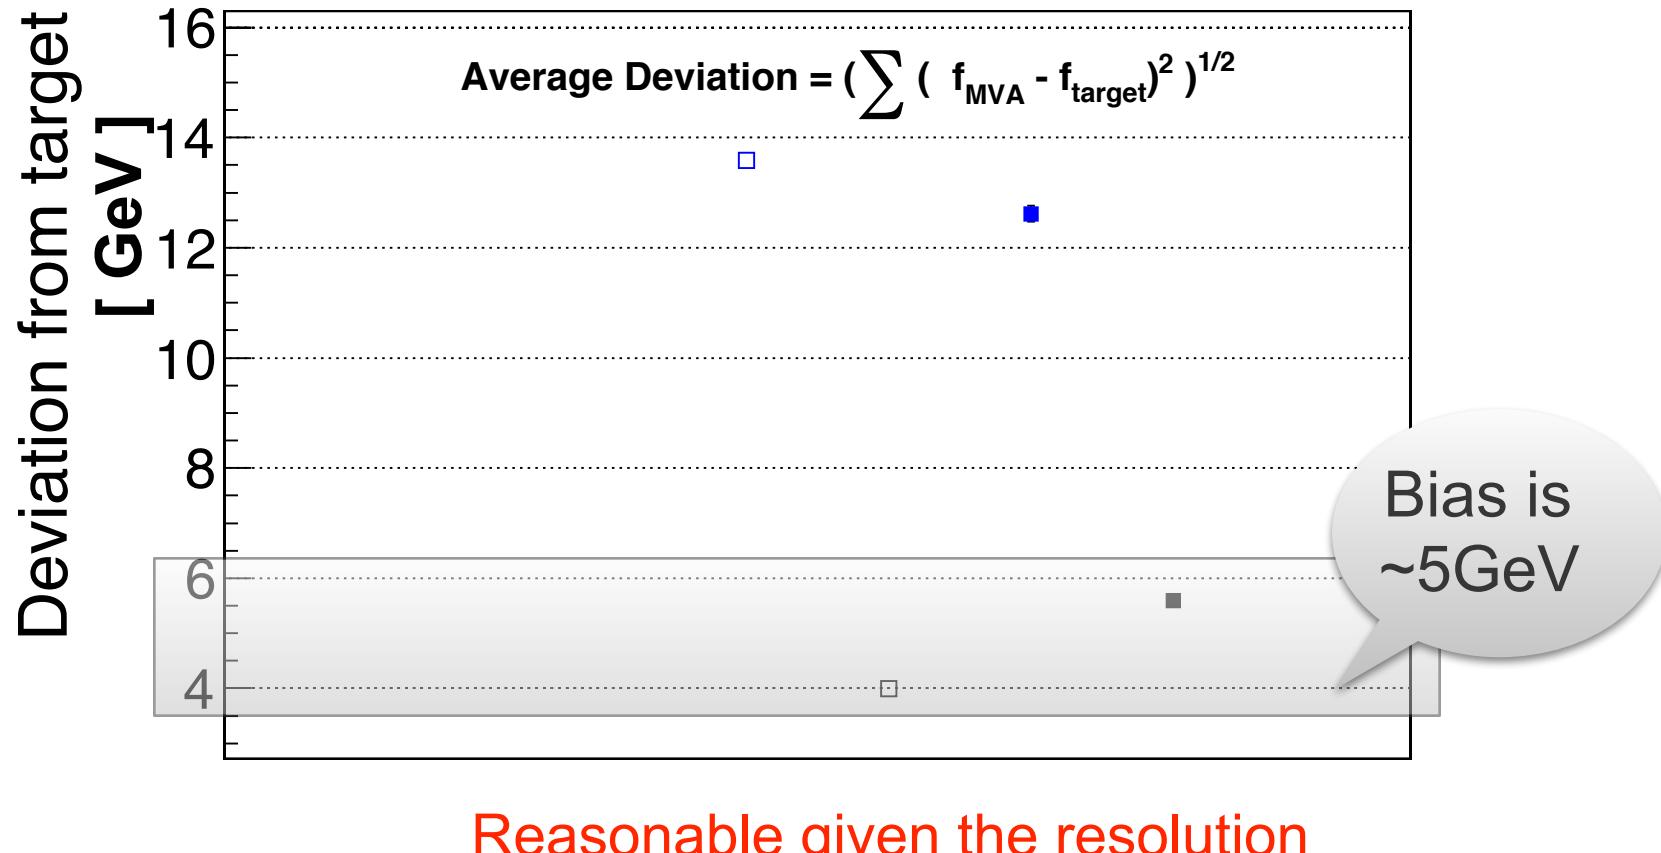

# Reconstructed W mass using $v$ $p_z$ from regression

# How accurate is our prediction ?

- Training Sample, Average Deviation
- Training Sample, truncated Average Dev. (best 90%)
- Test Sample, Average Deviation
- Test Sample, truncated Average Dev. (best 90%)

# Code and regression kernel
